**WARNING:**  
DO NOT ATTEMPT TO OPERATE  
ANY STRYKER CROSSBOW BEFORE  
READING THE PRECAUTIONS!!!

2008

FIRST BORN

COCK >> LOAD >> SQUEEZE

GAME OVER

### WARNING: GENERATES TESTOSTERONE!

The Stryker Crossbow generates testosterone. Do not use this crossbow if you plan to participate in any kind of athletic drug testing. Use of this crossbow will absolutely, definitely result in a positive test. In fact, standing in the same room or even just thinking about the Stryker has been known to elevate testosterone levels. After all, it is a performance enhancing device.

### DANGER: HIGHLY EXPLOSIVE!

This product is extremely volatile! The Stryker Crossbow cranks out a 16-3/4 inch power stroke. That's 20% more string travel than any other crossbow on the market, producing 155 ft/lbs of kinetic energy. That's 70% more than the nearest competitor. In fact, Striker 425 gr bolt has 56% more energy at 25 yards than any other competitor has at the get go.

### ALERT: MIND-NUMBING SPEED!

The Stryker Crossbow reaches speeds of 405 feet per second. That's fast. Bonneville Salt Flats fast. Fast enough to reach a target in the next county before you finish squeezing the trigger. Fast enough to send our engineer from the room drooling and babbling incoherently. Faster than a cat in a room full of rocking chairs. And with this kind of speed comes accuracy because nothing has time to interfere. Not wind. Not weather. Not even gravity.

### CAUTION: HIGHLY SENSITIVE TECHNOLOGY!

Owning a Stryker carries additional responsibilities typically associated only with classified instrumentation. Binary Cam & Horizontal Force Technologies result in reduced shock and less noise. Highly efficient wrapped split limbs and greater limb angle increase speed, accuracy and durability. And speaking of sensitive, we should warn you that the Stryker may send the competition home crying to mommy.

## BOWTECH GENETICS

- » Easy cocking/de-cocking process.
- » Cocking device components housed inside the bow.
- » Military standard Weaver rail allows for after market accessories like flashlights, bipods, laser sights, and pistol grips.
- » Foregrip is adjustable and/or removable for a personalized fit.
- » Fixed scope rail provides repeatable accuracy, durability and optimal ergonomic position and height.
- » Patent pending bolt sensor resets the safety any time a bolt is removed eliminating the possibility of a dry fire.
- » Binary Cam System with needle roller bearings provide durability & less friction resulting in increased performance and efficiency.
- » Purchase includes:  
Multiple Reticule Red-Dot 1x30 Scope,  
Four Matched 425 Gr Bolts, Hard Carrying Case, Sling, Hip Quiver & Extra String.

Outdoor author & TV host Scott Haugen celebrating a great day with his Stryker and big bird.

Lane Tobiassen of Crimson Trace is all smiles after his Stryker success.

NEWBORN

FEW GENERATIONS HAVE BEEN GRANTED SUCH ABILITY TO PERFORM

BLOODLINE COUNTS

### BIOHAZARD: NEW ANTIDOTE-RESISTANT STRAIN!

Desert Stryker, the new, younger brother of the clan, brings a strain of intensity to the Stryker family of crossbows that infects anyone who comes into contact with it. The likelihood of advanced archery achievement increases exponentially with this feisty addition to the bloodline. So far, all attempts to resist its overpowering attraction have been futile, to both archer and quarry.

### ATTENTION: GUILT-INDUCING EXPERIENCE!

Center Pivot Limb Design, the latest innovation to roll out from the BowTech labs, has made its way onto this daring new crossbow. Center Pivot design places the riser at the center of the limbs to give the Desert Stryker a greater transfer of stored energy upon release. BowTech developed it specifically to convey subzero hand shock and eliminate excessive noise. You get a delivery that's smoother than a two-hour Tai Chi massage.

### NOTICE: NOT INTENDED FOR TECHNO-PHOBES!

The Desert Stryker packs enough technological marvels into its small package to defy explanation as well as the laws of physics. WhisperTech Silence technology shuns sound and vibration. The Binary Cam System self-centers the draw and synchronizes the cams. And Extreme Horizontal Force Technology sends bolts flying faster than Peter Pan on a caffeine bender.

### HEADS UP: SUDDEN SATISFACTION AHEAD!

Desert Stryker is always trying to prove something to big brother Stryker. That's why it sports a 15 inch power stroke and generates an impressive 116 ft./lbs. of kinetic energy and an imposing speed of 350 fps (firing a 425-grain bolt). Astounding accuracy, cat-like stealth, and unbridled power make the Desert Stryker a chip off the old block.

## BOWTECH GENETICS

» Optional accessory package includes: Multiple Reticle Red-Dot 1x30 Scope, Four Matched 425 Grain Bolts, Sling, and Hip Quiver.

» Optional EZ<sup>2</sup>Draw cocking aid reduces pull by 50%

- » Lightweight and compact sporting a 14 1/4 inch axle-to-axle width at full draw.
- » Superior WhisperTech Silence technology stunning the market with its lack of noise and vibration.
- » Proprietary Center Pivot limb design.
- » Patented Binary Cam arrangement resists being pulled off center with enough force to self-center itself in the string hook.
- » Teflon coated string hook reduces serving wear for extended string durability.
- » Extreme Horizontal Force Technology delivers a silent, shock free shot.
- » Crisp trigger pull with undetectable travel
- » Patent pending bolt sensor safety system

## BLOODLINE COUNTS

### STRYKER

- » 405 feet per second (425 gr bolt)
- » 175 lbs draw weight
- » 17 inch power stroke
- » 155 ft/lbs kinetic energy
- » 10.6 lbs mass weight
- » 27 1/4 inch axle-to-axle
- » 24 1/2 inch axle-to-axle at full draw

### DESERT STRYKER

- » 350 feet per second (425 gr bolt)
- » 155 lbs draw weight
- » 15 inch power stroke
- » 116 ft/lbs kinetic energy
- » 8.6 lbs mass weight
- » 18 1/4 inch axle-to-axle
- » 14 1/4 inch axle-to-axle at full draw

## STRYKER MISSION

To lead the crossbow industry as an advocate dedicated to promoting our rich hunting heritage, provide quality equipment to ensure ethical and humane harvesting, and to use our products as a crossover vehicle to broaden hunting opportunities between the two worlds of bow and rifle hunting.
